A MB and Fc peaks (modelled)
As originally modelled -- a distinct dual peak has not yet been observed experimentally on the fabricated device.
MB ($F_k = 0$)
Fc (reference)
600 mV (modelled)
ΔI (nA)
Potential (mV vs Ag/AgCl)
B Ratiometric pipeline closure
Ideal ($F_k^{rec} = F_k$)
Ratiometric recovery
±3.4% noise floor
Recovered F_k^{rec}
True F_k
C Frequency diagnostic
$P(d)$-averaged model
Single k^0 at mean d
Operating 15 Hz
ΔI_{peak} (normalised)
SWV frequency f (Hz)
D Quadrature convergence
$n_{dist} = 80$ (used)
< 0.5% error
Relative error vs $n_{dist} = 160$ (%)
Quadrature points n_{dist}
