

D What is and isn't validated

Laviron (1979) FWHM formula

Confirmed: read directly from paper, used as published

Dauphin-Ducharme (2017) k^0, α for MB-gold

Confirmed: read directly from paper

Simulator shape vs Laviron limit

Not matched (24% RMS); different mathematical objects, see text

Simulator vs DD2017 data ($\kappa \approx 250$)

Not possible: simulator unstable at their operating κ

Simulator in operating range ($\kappa = 3.2$--6.4)

Stable and well-behaved (panel B)
