

Supplementary Figure 1. Multiple sequence alignment of the catalytic domains of the nine MMPs investigated. Conserved residues are shaded in red, blue boxes indicate amino acid with highly similar physico-chemical properties. Secondary structure elements are represented with helices for α-helices and flat arrows for β-sheets. Sequence numbering is according to the respective UniProt entries (MMP1: P03956; MMP2: P08253; MMP3: P08254; MMP7: P09237; MMP8: P22894; MMP9: P14780; MMP12: P39900; MMP13: P45452; MMP14: P50281), and (#) indicates the insertion sites of the fibronectin-like type-II collagen binding domains found in MMP2 and 9.
