

D What is and isn't validated

Laviron (1979) FWHM formula

CONFIRMED -- read directly from paper, used as-is

Dauphin-Ducharme (2017) k^0, α for MB-gold

CONFIRMED -- read directly from paper

Simulator shape vs Laviron limit

NOT matched (24% RMS); different mathematical objects, see text

Simulator vs DD2017 data ($\kappa \approx 250$)

NOT possible -- simulator unstable at their operating κ

Simulator in our own operating range ($\kappa = 3.2$--6.4)

STABLE and well-behaved (panel B)
