A
What a voltammogram shows
position
height: proportional to intact probe
width (FWHM)
net current ΔI (nA)
15
10
5
0
−400
−300
−200
−100
applied potential (mV vs Ag/AgCl)
B
Where the net current comes from
current, units of $n_e F \Gamma A \cdot 2f$
0.6
0.4
0.2
0.0
−0.2
forward pulse, I_{fwd}
reverse pulse, I_{rev}
net, $\Delta I = I_{fwd} - I_{rev}$
−400
−300
−200
−100
applied potential (mV vs Ag/AgCl)
C
Cleavage shrinks the peak
net current ΔI (nA)
15.0
12.5
10.0
7.5
5.0
2.5
0.0
$F_k = 0.00$
$F_k = 0.25$
$F_k = 0.50$
$F_k = 0.75$
−400
