A Non-enzymatic loss reads as cleavage
recovered F_k^{rec}
true cleavage fraction F_k
$\delta = 0\%$
$\delta = 2\%$
$\delta = 5\%$
$\delta = 10\%$
$\delta = 20\%$
B
Bias $= \delta(1 - F_k)$
upward bias in F_k^{rec} (points, %)
δ: non-enzymatic loss (%)
$F_k = 0.00$
$F_k = 0.14$
$F_k = 0.52$
C
A false reading from drift
apparent [MMP-9] in a blank (nM)
δ (%)
$T = 10$ min
$T = 30$ min
$T = 60$ min
healing / chronic boundary (6 nM)
