A Distance distribution $P(d)$
$d_{PEG} = 14.0$Å
$\langle d \rangle = 21.8$Å
$\sigma_z = 9.8$Å
$P(d)$ (Å^{-1})
Distance d (Å)
B ET rate and κ vs distance
$k^0_{ref} = 127$ s^{-1}
$k^0(d)$ (s^{-1})
$\kappa = k^0/(2f)$
Distance d (Å)
C SWV waveform
SWV waveform
Staircase E_{step}
I_f sampled
I_b sampled
$\tau = 1/(2f)$
$2E_{sw}$
Potential (mV)
Time (s)
D Quasi-reversible optimum
Quasi-rev. ($0.5 < \kappa < 10$)
$\kappa_{tip} = 4.2$
$\kappa_{mean} = 0.002$
ΔI_{peak} (normalised)
$\kappa = k^0/(2f)$
