A
Charging dies before sampling
current / its initial value
time after the potential jump (ms)
sample here
capacitive (charging)
Faradaic, $\kappa = 0.5$
B
CV: signal sits on a plateau
current / ($C_{dl}Av$)
potential (mV)
charging plateau
anodic sweep
cathodic sweep
C
Background at the sampling instant
charging / Faradaic current
1.8
$\approx 10^{-63}$
CV: charging per Faradaic
SWV: charging per Faradaic
