Layer 7: SAM competitive Langmuir adsorption
(Ka_p, Ka_d flagged — Ka_p/Ka_d ratio assumed 0.05)
A — Probe loading vs c_p (c_d = 100 µM MCH)
Target Γ_p window (2–5 pmol/cm²)
c_p for 2 pmol/cm² = 4.05 µM
c_p for 5 pmol/cm² = 10.15 µM
Γ_p at equilibrium (pmol/cm²)
Probe-thiol concentration c_p (µM)
B — Probe loading vs c_p/c_d ratio (c_p = 1 µM)
Target window
Γ_p at equilibrium (pmol/cm²)
Deposition ratio c_p / c_d
