A
Charging dies before sampling
current / its initial value
time after the potential jump (ms)
sample here
capacitive (charging)
Faradaic, κ = 0.5
B
CV: signal sits on a plateau
current / (C_dl A v)
potential (mV)
charging plateau
anodic sweep
cathodic sweep
C
Background at the sampling instant
charging / Faradaic current
1.8
≈ 10^−63
CV: charging per Faradaic
SWV: charging per Faradaic
