MMP-2 PDB 1QIB

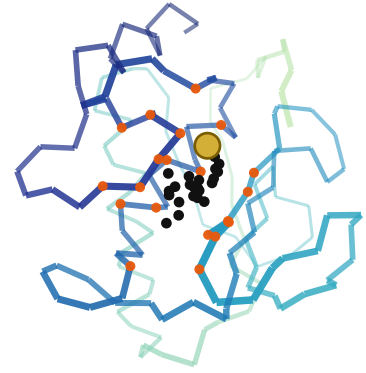

2.8 Å · 160 residues
catalytic site: HIS201, HIS205, HIS211

MMP-8 PDB 1JAN

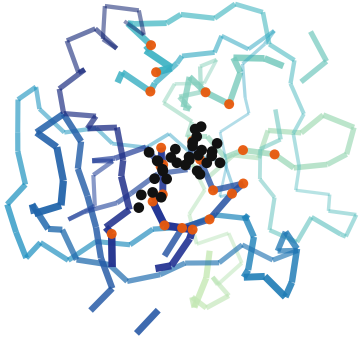

2.5 Å · 164 residues
catalytic site: HIS197, HIS201, HIS207

MMP-9 PDB 1GKC

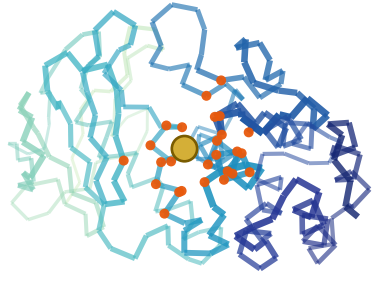

2.3 Å · 159 residues
catalytic site: HIS401, HIS405, HIS411

Neutrophil elastase PDB 1HNE

1.84 Å · 210 residues
catalytic site: ASP102, HIS57, SER195

LasB PDB 1EZM

1.5 Å · 298 residues
catalytic site: GLU164, HIS140, HIS144

- Cα trace (N to C terminus: light to dark)
- pocket residue (Cα)
- bound inhibitor atoms
- catalytic zinc

Each view looks down onto the active site. Pocket: residues within 6 Å of the bound inhibitor (or 9 Å of the catalytic zinc when apo). These are experimental structures; they are shown for context and are not model output.
